

# DeepSight Toolkit 6.3.0

## What's new?

- **Powered by DeepSight SKD 0.11**
- **New 'Push' over HTTPS**
- **New feature: Distance from camera**
- **New feature: Wall Gaze**
- **New output field: Detection confidence**

The new DeepSight Toolkit 6.3 continues the trend of refining the output, which started with version 6.2. Powered by our latest SDK, the new Toolkit comes with a couple of new features such as 'Distance from camera' and 'Wall Gaze', while providing more flexible Push output options over HTTPS and uncovering a new field in the raw CSV and JSON output called: 'detection\_confidence'.

Both 'Distance from camera' and 'Wall Gaze' are features that would normally require high end 3D cameras. The Toolkit can use almost any USB or IP camera thanks to its proprietary deep learning algorithms.

- **Removed feature: 'Send image data' on Output tab**

This was removed in an effort to make the Toolkit analysis as private and anonymous as it can be.
