

# DeepSight Toolkit 6.5.0 release notes

## What's new?

- **DeepSight SDK 0.13.0**
- **Dwell computed on SDK level**
- **Removed CrowdSight output mode**
- **Removed 'experimental' from 'Enable GPU'**
- **Process-all-frames CSV output bug fix**
- **Single digit date output fix**
- **CSV name format change**

The new Toolkit includes the above improvements along with all the neat updates previously shipped with the new DeepSight SDK 0.13.0 release.

Dwell is computed on an SDK level meaning it is now available in the raw Toolkit output.

### **Notice to CrowdSight Toolkit users:**

The output mode that allowed backward compatibility with CrowdSight Toolkit has been removed from DeepSight Toolkit. Please make sure to take the DeepSight output format into account before integrating the new Toolkit in your existing projects.
